ESTÍMULOS

```
//Será um vetor que estará apontando para diagonal de frente e direita
Vector3 a = (transform.forward+transform.right);
//Vetor que aponta para frente
Vector3 b = (transform.forward);
//Será um vetor que estará apontando para diagonal de frente e esquerda
Vector3 c = (transform.forward-transform.right);
```

```
//É necessário para os inputs sempre darem valor de -1 a 1 pq senão a rede neural fica presa
if (Physics.Raycast(r , out hit)){
    //Dividir por 20 assegurará que não será um numero mt grande
    //Caso o numero fosse muito grande, quando chegar na função de ativação sigmoide
    //Ele tenderá a 1, e se ficar tendendo a 1 nunca vai diversificar
    aSensor = hit.distance / 15;
float distanCarWallB = 0;
r.direction = b;
if (Physics.Raycast(r , out hit)){
    bSensor = hit.distance/15;
    distanCarWallB = hit.distance;
r.direction = c;
if (Physics.Raycast(r , out hit)){
    cSensor = hit.distance / 15;
```

saída
